### Working out the best way to solve a number sentence

Look at these number sentences. Some of them are muddled up and need sorting. Remember, it is easier to solve a question by putting the biggest number first. Can you re-write these number sentences and solve them?

You can use whatever resource you would like!

Eg:  $2 + 10 =$  is easier to solve as  $10 + 2 = 12$

$$2 + 7 =$$

$$5 + 12 =$$

$$1 + 9 =$$

Can you now work out these by counting on...

For example: holding 10 in your head and then counting on 5  
(10,11,12,13,14,15)

$$10 + 5 =$$

$$3 + 6 =$$

$$5 + 9 =$$
